SPL® Advanced Project Management Workshop

3 days - 21 PDUs

If you're looking to take your project management skills beyond the fundamental level or if you're looking to develop your understanding and ability to apply the advanced project management tools and techniques required for PMP® certification, this is the workshop for you. As projects become more complex and teams become more distributed and more diverse, a project manager needs more than a Gantt or Bar Chart to manage and lead their teams to a successful project completion.

In this three day workshop participants learn, through lecture and computer simulation, advanced project management concepts like individual and team motivation, leadership, earned value, procurement management, stakeholder relationship management, quality management and risk management.

› In teams of four, participants actually plan and manage a complex simulated real-life project. They learn what it feels like as they make real decisions and get real feedback. The simulation powered learning is practical, engaging, intense and challenging. It's designed to give you the practice and confidence to actually apply your advanced skills in the workplace or prepare you with the knowledge and understanding to help you pass the PMP Exam.

Topics You Will Learn & Practice:

- Earned Value Management
- Risk Management
- Quality Management
- Integrated Change Control
- Stakeholder Relationships
- Procurement Management
- Teambuilding
- Leadership
- Creating a positive work model
- Effective Questions

› “This was a Five Star event - We learned more in three days then we have in the past three years” - P.G Hartford Life

About Simulation Powered Learning®

Simulation Powered Learning® is Fissure's own unique approach to training that incorporates hands-on experience into course work rather than the traditional lecture/textbook methods of teaching. We begin by giving you the base of knowledge you need in each class. We then immerse you in computer-simulated situations that take you through real-life project management successes and mistakes – both critical to learning. SPL® takes you far beyond the traditional “listen and practice once” model to provide hands-on learning experiences by planning and managing projects from beginning to end.
