

Specialized Project Domain Expertise

fissure

Fissure consultants have focused areas of expertise that relate to your specific project management environment.

Description

Software and CMM/CMMI/ISO Project Management – Managing a software project is like trying to construct a building without an ability to see it or touch it to see how you are doing. That complicates the planning and managing of software projects. The Capability Maturity Model and other process improvement models recognize that having good project management processes and tools is one of the first areas to be addressed in improving software development. Fissure has been involved with the CMM and ISO models since their beginning and we can help your organization create the necessary project management culture required to meet your specific improvement goals. Creating this culture involves training and consulting specific to software development – something we do every year with many different clients.

New Product Development Project Management – Managing new product development brings its own unique challenges. Unclear and constantly changing requirements, unknown research tasks, and coordinating cross functionally with diverse groups like marketing, sales, engineering and manufacturing all bring another level of challenge to the project manager working to fixed budgets and fixed schedules. Fissure has the experience and expertise to help your organization bring project management process and control to your new product development. Integrating the project management and new product development processes is one of our specialties.
